1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: the abstract currently in this application is improper because it is not on a separate sheet. A proper abstract has been produced below.

2. The following is an examiner's statement of reasons for allowance: the claims are allowable because the prior art of record fails to disclose or teach the claimed connector comprising a slot of predetermined length, a link portion for connecting the supporter to the slot, the link portion comprising a pair of links with an end of each link being connected to the slot in order to pivot the slot, and the other end of the links being connected to the supporter and being connected pivotably about the same rotational shaft (claims 1 and 7), or the first ends of the first and second reciprocating members being coupled to first and second rollers that move within the slot in opposite directions to allow the communication pad to move between the extended and retracted positions (claim 14), or the length of the slot being smaller than a corresponding length of a back surface of the supporter (claim 18).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The drawings filed on October 22, 2008 are acceptable.

ABSTRACT OF THE DISCLOSURE

There is a problem in that it is inconvenient to use a conventional communication pad since a user cannot diversely adjust a direction of the communication pad. The present invention relates to a communication pad mounting structure of a refrigerator. In the present invention, a front of a door of a refrigerator is formed with a seating space. The upper and lower portions of the seating space are formed with slots elongated from side to side, respectively. The holder for supporting a communication pad is mounted in the seating space tiltably from side to side. To this end, there are provided a pair of links, wherein an end of the links is connected to the slot to pivot and move along each slot, and the other end of each of the links is pivotably connected to a side of each of the upper and lower surfaces of the holder. According to the present invention with such a structure, the communication pad which is supported by the holder can be tilted to a desired position according to a position of the user.
